

Practice

Subtracting 7's, 8's and 9's From Larger Numbers

Example: $142 - 9 = 133$

Break large numbers into two portions.
For example treat 142 as 14 tens and 2 ones.

See the video (or read the text)

"How to Subtract from Bigger Numbers"

to see how.

The examples below
are partially filled in for you (in grey).

Subtract the number shown at the top of the sum
again and again.
