

Practice Subtracting with Larger Numbers

Example: $91 - 19 = 72$

See the video (or read the text)

"Sub by Bigger Numbers"

to see how.

The examples below
are partially filled in for you (in grey).

Subtract the number shown at the top of the sum
again and again.

*As the numbers get larger
it gets more difficult to do.
We need another technique for handling
long subtractions!*
